Process & Design documentation

Project/Design Decisions:
The aim of the sidequest was to set up VScode and Github. One of the decisions I made while completing the sidequest was changing the colour of the background in the p5 sketch code to red rather than grey. I made this decision to test the Live server VSCode Extension and ensure that the VScode would translate any code changes to the server allowing me to see my own work update in real time.

GenAI Documentation:
No GenAI was used in this Assignment
